4.07 Assignment Instructions

Instructions: Write a program to calculate total daily energy expenditure.

1. Create a new project called 4.07 TDEE in your Mod04 Assignments folder.

- 2. Create a class called TDEE in the newly created project folder.
- 3. Download <u>4.07 Virtual Lecture Notes</u> to the Mod04 Documents folder. Read this document before beginning the assignment.
- 4. This program should ask the user for their name, gender, and BMR.
- 5. Present the user with a menu of activity levels (see 4.07 Virtual Lecture Notes.)
- 6. Calculate the TDEE based on gender and activity factors.
- 7. The program should accept uppercase and lowercase letters for a menu option.
- 8. The program should alert the user if a non-menu item character has been entered.
- 9. Design a user-friendly menu and neatly display the output for each option.

You will save a significant amount of time if you take five minutes and design your menu and at least make a pseudocode outline of the structure of your program.

Expected Output: The design of the screen display for user input, the menu, and the program output is completely up to you; just be sure it is user-friendly.
